

Professional Cover Letter

Dear Visitor, Business Partner, or Recruiter:

Welcome to my professional space. I am Martín Lizárraga, Senior Systems Engineer and Operations Administrator with over 12 years of experience leading the convergence of technological infrastructure, smart automation, and strategic operations management. Throughout my career, I have had the opportunity to direct highly complex projects both locally and within international corporate environments across the United States and Europe. My professional approach is not limited to just deploying technology; it focuses on transforming technical infrastructure into a profitable, secure, and efficient asset for organizations.

My value proposition is built upon three core pillars drawn from my global experience:

Systems Engineering & Advanced Connectivity: Specialist in the design and implementation of network architecture, high-definition electronic security systems (IP CCTV), access control, and Smart Space Integration (IoT).

Operations Management & Global Logistics: Solid experience in managing critical resources, asset and inventory control through ERP systems (such as InfoShip), budget management, and the optimization of international supply chains.

Innovation & Data Analytics: Utilizing modern tools such as Python, SQL, and Power BI alongside Generative Artificial Intelligence to automate workflows, diagnose complex systems, and facilitate data-driven decision-making.

As the founder and technical leader of Techwise Peruana, I have designed and implemented comprehensive "turnkey" technological solutions for the residential and corporate sectors, always guaranteeing operational continuity and optimized profitability through strategic negotiations with global vendors. Furthermore, my tenure at multinational corporations like Carnival Cruise Lines solidified my ability to lead multidisciplinary teams under strict international standards and high-pressure environments.

My Professional Philosophy:

"Technology only reaches its true potential when it is aligned with flawless logistical management and a clear financial strategy."

I am ready to bring this unique combination of engineering and management to organizations looking to make a quantitative leap in their digital transformation, architectural security, or operational optimization, whether locally or in international expansion projects.

I invite you to explore the sections of my portfolio to review my background, education, and technical skills in detail. If you would like to coordinate a technical meeting or evaluate a strategic collaboration, my contact channels are completely open.

Sincerely,

Martín Lizárraga Hernández

Senior Systems Engineer | Operations & Logistics Specialist
